

Experienced JavaScript developer needed to build phonegap apps

As a javascript developer you'll be responsible for creating frontend applications using angular-js or similar frameworks.

You'll be working with an amazing team of frontend developers to package javascript applications in phonegap to be deployed on iOS and android. You will need to have experience in integrating different third party APIs using js to provide functionality to our websites and apps. Experience with frontend development frameworks, jQuery and Git will be a bonus.
